

An independent global expert in greenhouse gas verification, ISO certification and product certification

## Verification for Aviation

### Time is Running Out

With our expertise in consulting and verification, CICS will *FLY* you through the EU ETS Carbon Regulations

**If you fall under the EU Emissions Trading Scheme, you MUST report INDEPENDENTLY VERIFIED emissions by 31 March 2011.**

CICS offers monitoring, reporting and verification services for U.S. and Mexican airlines affected by the European Union Emissions Trading Scheme (EU ETS). As of January 1st 2010, the EU ETS requires all airlines flying into and out of European Union airspace to monitor their CO<sub>2</sub> emissions. By 31st March 2011 these must be verified and reported, ahead of full trading beginning in 2012.

**Verification must be carried out by an independent body that has been accredited by UKAS (United Kingdom Accreditation Service). CICS is pleased to announce that it is one of the first verification bodies to be recommended to receive accreditation by UKAS to provide Greenhouse Gas verification of ton/kilometer and emissions data for aircraft operators under the EU ETS Scheme.**

### Consulting for Voluntary Monitoring and Reporting

Even airlines not affected by EU ETS requirements are concerned about the impact of carbon emissions on their long-term business. Most are already preparing voluntarily to monitor carbon emissions, in anticipation of the ultimate creation of both mandatory carbon emissions reporting and a full-scale carbon trading market. CICS aids these companies through consultative assistance, including:

- Total fuel burn or for certain eligible flights.
- Assessment of passenger offsetting schemes.
- Airport carbon footprint.
- Carbon footprint verification of groundworks (offices, support services, etc).

### Why CICS?

- A multi-year track record in aviation verification
- Specialized consulting for the airline industry
- Recommended to receive accreditation by UKAS to provide verification of ton/kilometer and emissions data
- Undertaken training with IATA's Training and Development Institute
- Independently verified carbon emissions for numerous airports and for several major international airlines to support their offset programs.

“CICS offers you years of experience in carbon emissions. Whether you need to get your arms around carbon monitoring and reporting, or are ready for independent carbon verification, we have the skilled experts who will get you through the task efficiently and in a timely manner.”

- Shaun Bainbridge, Director, CICS
